DYNAMICS 365 CRM INTEGRATION CONNECTOR
AUTOMATE ESCALATION TO DEVELOPMENT & ENGINEERING

Our best customers have a common goal --- to automate the escalation of cases (or tickets) from customer facing support teams using **Dynamics CRM** case management, to development or engineering teams, using project management applications like Azure DevOps, Jira, Rally, VersionOne & GitHub. To deliver seamless integration, we provide a purpose built connector (managed solution) that automatically syncs data, eliminates data re-entry, stream lines customer service, enhances communication and reduces costs.

Connecting Support & Development Teams Has Never Been Easier.
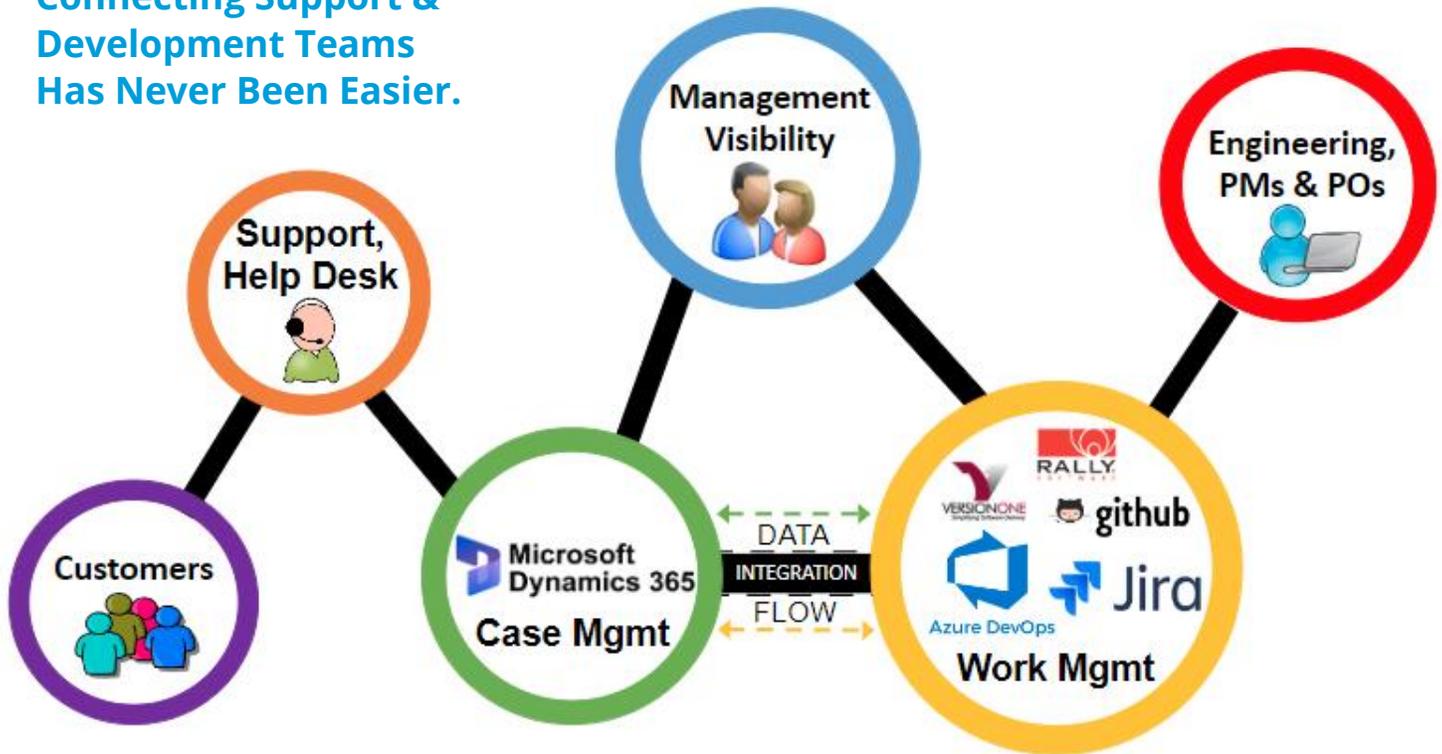

Targeted Integration

We connect support and development. This is all we do. We are a targeted niche integration service. We go deeper and support this flow like no one else.

No Installation. Support Included!

You won't need IT for this one. We are a Microsoft Azure cloud service (SaaS). You only need an account (e.g., free trial) to get started.

Ready Now!

No development is required. Zero. Nada. Zilch. Point-and-click configuration and you are done. You can integrate in minutes. Eliminate the black hole between support and development today!

"We started with a demo, followed by a free trial and PoC. Integration setup and configuration was fast and easy. We were in production within 2 days. Customer support is second to none!"
